FinFlow

Senior Product Analyst, Core Payments & Retention

London (hybrid) · Full time · Sample job spec for RoleReady

About the role

FinFlow is looking for a Senior Product Analyst to join our Core Payments & Retention squad. You will partner closely with Product Managers, Engineers, and Account Management to uncover growth levers, reduce involuntary and voluntary churn, and drive self-serve analytics adoption across the company.

Key Responsibilities & Requirements

- 3+ years of experience in product analytics, data science, or business intelligence in a fast-paced SaaS or fintech environment.
- Advanced SQL proficiency and hands-on experience building scalable data models with dbt and BigQuery or Snowflake.
- Proven track record of designing, sizing, and analysing A/B experiments (onboarding, checkout, or pricing flows) with statistical rigour.
- Experience building self-serve BI dashboards in Looker or Tableau adopted by commercial and customer-facing teams.
- Deep familiarity with subscription billing, payment recovery, and cohort retention metrics (NDR, LTV, logo churn).
- Strong stakeholder communication skills: ability to translate noisy product event data into clear executive recommendations.
- Experience partnering with engineering to define and govern event-tracking taxonomies (Segment, Amplitude, or Mixpanel).
